

biblatex-chem – A set of **biblatex** implementations of chemistry-related bibliography styles*

Joseph Wright[†]

Released 2011/08/17

Abstract

The **biblatex-chem** bundle is a set of styles for creating bibliographies using **biblatex** in the style of a number common chemistry journals. The bundle comprises styles based on the conventions of the Royal Society of Chemistry, American Chemical Society and *Angewandte Chemie*. It therefore covers the journal styles of, for example:

- *Angewandte Chemie*
- *Biochemistry*
- *Chemical Communications*
- *Chemistry – A European Journal*
- *Dalton Transactions*
- *Journal of the American Chemical Society*
- *Organic & Biomolecular Chemistry*

amongst others.

1 Introduction

The **biblatex** package introduces a completely new method for controlling the creation of bibliographies using **BIB_TE_X**. This makes a great deal of flexibility available when creating bibliographies, most of which is much more difficult with traditional **BIB_TE_X** styles.

In order to use **biblatex**, an entirely new set of appropriate supporting styles are needed. This bundle provides a number of styles for chemistry, following the rules of some of the most important journals in the field.

2 The styles

The bundle currently contains four **biblatex** style files, each of which has its own demonstration document:

- The **chem-acs** style, which covers most American Chemistry Society journals.

*This file describes v1.1c, last revised 2011/08/17.

[†]E-mail: joseph.wright@morningstar2.co.uk

- The **chem-angew** style, which covers *Angewandte Chemie Chemistry – A European Journal*.
- The **chem-biochem** style, which covers *Biochemistry* and a small number of other American Chemistry Society journals.
- The **chem-rsc** style, which covers all Royal Society of Chemistry journals.

The four styles can be used to follow the current layout rules of all of the journals currently published by the American Chemical Society and the Royal Society of Chemistry, plus the journals published by Wiley which use the *Angewandte Chemie* format.

The styles use the standard **biblatex** database requirements. This means that a database designed for traditional **biblatex** use may need some editing for optimal output. The accompanying example database **biblatex-chem.bib** shows examples of all of the supported entry types with common fields filled in.

3 Style options

All of the styles here add a small number of package options to the standard set provided by **biblatex**. This allows the styles to cover the variations seen between different journals without needing a very large number of files: the American Chemical Society in particular varies the exact details between journals.

doi	The standard style options doi , eprint isbn and eprint , as described in the biblatex manual. However, these options are turned off as standard by the styles in the biblatex-chem bundle. This reflects the fact that these entries may be present in reference databases but are not generally included in published bibliographies. Note that DOI values are printed for journal articles with no pages given, even if the doi option is false
eprint	
isbn	
url	
subentry	In common with the standard biblatex numeric styles, all of the styles in the bundle support the boolean subentry option. With this set true , entries of type set are given individual labels within the bibliography.
articletitle	The use of article titles varies between individual journals. The boolean option articletitle is available to control this behaviour. The standard settings for the chem-acs , chem-angew and chem-rsc styles have this option turned off, while the chem-biochem sets this option true .
biblabel	The format of the numbers used in the bibliography (the “bibliography label”) varies from journal to journal even if the same general style is used. The biblabel option allows the user to easily set the format used. This option takes a value from the list: parens , brackets , plain and dot .
chaptertitle	The option boolean chaptertitle option is provided to allow flexibility for the inclusion of chapter titles for inbook and incollection entries. The standard setting is false for all styles in the bundle.
pageranges	The use of full page ranges varies between journals and indeed between different papers in individual journals. The pageranges boolean option is available to turn on and off printing of full page ranges, thus allowing printing of only the first page even when the database contains the full page range. This option is set true as standard.

4 New styles

The current set of styles here is intended to form a strong base for chemists. However, there will be the need for other styles to be created. The package author welcomes suggestions for other styles for inclusion. It would also be good to keep all chemistry-related **biblatex** styles in one bundle. Others working on chemistry styles for **biblatex** are welcome to send them to the bundle maintainer so they can be incorporated here.

5 Errors and omissions

Suggestions for improvement and bug reports can be logged in the package issue database, found at <https://bitbucket.org/josephwright/biblatex-chem/issues>, or can be sent by e-mail to joseph.wright@morningstar2.co.uk.

Change History

v1.0		v1.1	
General: First stable release	3	General: Styles revised to work with biblatex v1.6	3
v1.0a		v1.1a	
General: Format “ <i>et al.</i> ” in italics when using chem-rsc style	3	General: Reintroduce chaptertitle option for chem-angew and chem-rsc styles	3
v1.0b		Turn off standard eprint and isbn options by default	3
General: Require biblatex v1.1	3	Turn off standard url option by default	3
Use new maxbibnames option such that bibliographies print all authors but citations use truncated lists when necessary	3		
v1.0c		v1.1b	
General: Add version history for stable releases	3	General: Further documentation improvements	3
v1.0d		Re-introduce the biblabel option	3
General: Corrections for formatting of optionally-included article and chapter titles	3	v1.1c	
Include additional punctuation tracker corrections for non-English bibliographies	3	General: Correct bug in entries with no date in chem-ac s and chem-ac s styles	3
