

Example for lastpage

This example demonstrates the use of package `lastpage`, v1.2k as of 2011/09/01 (HMM; JPG).
The package takes no options.
For more details please see the documentation!

keys

To hide the `\keys` use option `final` instead of `draft` with the `showkeys` package (or remove the package call from the preamble of this document).

Hyperlinks or not: If the `hyperref` package is loaded, the references are also hyperlinked:

Last page's name (LastPage): [IV](#)

If the `hyperref` package is loaded, but the hyperlinks of the references shall be suppressed, `\pageref*{...}` can be used:

Last page's name (LastPage): IV

Trademarks appear throughout this example without any trademark symbol; they are the property of their respective trademark owner. There is no intention of infringement; the usage is to the benefit of the trademark owner.

Tip: Use *logical page numbers* for the display of the pdf!
(In Adobe Reader X (10.1.0): Edit > Preferences (Ctrl+k) > Page Display > Page Content and Information > Use logical page numbers.)

If you are more ambitious in respect to your aims with this package, you might want to have a look at the `pageslts` package
(CTAN:/macros/latex/contrib/pageslts/).

Save per page about 200 ml water, 2 g CO₂ and 2 g wood:
Therefore please print only if this is really necessary.
I do NOT think, that it is necessary to print THIS file, really
(at least not after this page)!

The page (`\thepage`): I

Last page's name (LastPage): [IV](#)

The page (`\thepage`): II

Last page's name (`LastPage`): ~~IV~~^{`LastPage`}

The page (`\thepage`): III

Last page's name (`LastPage`): ~~IV~~^{`LastPage`}

The End

The page (\thepage): IV

Last page's name (LastPage): ~~IV~~^{LastPage}
