

## Example for pagecolor

This example demonstrates the use of package `pagecolor`, v1.0c as of 2011/08/08 (HMM). The used option was `pagecolor={LightGoldenrod1}`. `pagecolor={none}` would be the default.

For more details please see the documentation!

Save per page about 200 ml water, 2 g CO<sub>2</sub> and 2 g wood:  
Therefore please print only if this is really necessary.

The current page (background) colour is `\thepagecolor = LightGoldenrod1` (and `\thepagecolornone = LightGoldenrod1`, which would only be different from `\thepagecolor`, when the page colour would be `none`).

The current page (background) colour is  
`\thepagecolor = rgb:-green!40!yellow,3;green!40!yellow,2;red,1.`

Which made the preceding line of text practically invisible.
